

CDCO Information Technology Services

CERTIFICATION AND ACCREDITATION

Security is important to everyone. Federal Agencies are feeling extra pressure to comply with IT system security regulations, yet efforts to comply steal valuable time from the tasks required to run the business.

To simplify the Certification and Accreditation process for customers, CDCO, a customer-proven* provider of IT services, now offers C & A support services, through the Information Assurance (IA) division of CDCO's Security Services.

- CDCO Security Services maintains security for VA's National Data Centers via Technical Security, System Access Management, and Information Assurance.
- SS Professionals hold GCIA, GCIH, GCWN, Security+, Network+, CWNA, CIWP, CIWSA, and SCP certifications.
- IA professionals are experts in technical, operational, and managerial security and hold CAP, CISSP, CISA, PMP, and GSEC certifications.

CDCO's trained and experienced subject matter experts assist customers with the entire Certification and Accreditation process, throughout the System Development Life Cycle.

INFORMATION ASSURANCE CORE COMPETENCIES

Documentation

Development of required security artifacts for the Certification and Accreditation process according to NIST standards.

Monitoring

Application monitoring and documentation updates for continued compliance.

Security and Compliance Support

Support for adherence to FISMA, NIST, Privacy Act, OMB, and other Federal guidance.
